

HOW GE IS SUPPORTING THE FIGHT AGAINST COVID-19: MEDICAL EQUIPMENT FOR THE FRONT LINES

RAMPING UP PRODUCTION

- GE Healthcare is working around the clock to ensure that medical professionals on the front lines have the equipment they need to diagnose and treat patients with COVID-19, while prioritizing employee safety.
- We have increased manufacturing capacity of equipment used in the diagnosis and treatment of COVID-19 patients, such as CTs, ultrasound devices, mobile X-ray systems, patient monitors, and ventilators.
- We have doubled our capacity of ventilator production since the outbreak began and have plans to double it again by the end of June.
- Over 100 GE employees and retirees have volunteered to help manufacture ventilators at our facility in Madison, WI. We're also adding employees and expanding production lines to keep the facility open 24 hours a day, seven days a week.

SHARING OUR TECHNOLOGY

- GE Healthcare is partnering with Ford to accelerate and scale ventilator production. Through this collaboration, GE Healthcare is bringing its clinical expertise to license and leverage the design of an existing FDA-cleared ventilator from Airon Corp. Ford is providing its manufacturing capabilities to quickly scale production with the goal of producing 50,000 ventilators within 100 days.
- We issued clinician guidance for using GE Healthcare's anesthesia machines for patient ventilation. With more than 100,000 anesthesia machines in hospitals worldwide, this could help give medical professionals an immediate increase in ventilator options.
- GE Healthcare introduced a new software solution to support the treatment of COVID-19 patients. Scaled using Microsoft Azure, the Mural Virtual Care Solution allows clinicians to view numerous ventilated patients simultaneously and remotely, helping them to identify patients at risk of deterioration.

WHAT GE IS DOING

Across the United States and around the world, GE's 205,000 employees are working diligently to support customers, governments and the broader health care community in the fight against the coronavirus (COVID-19).

Our work includes providing mission-critical equipment and services across the health care, energy and aviation sectors, and we are proud of our employees who continue to make sure we can deliver for our customers and partners in this time of need.
